

Eurofoil to Make Large Investment to Increase Strategic Autonomy

After just over one year under new ownership, Eurofoil has launched a major project to expand its casting capacity. The multi-million-€ investment will increase Eurofoil's foilstock autonomy well beyond 85%. It will help to consolidate the position of Eurofoil as a market leader in Europe with a robust and strategically secure supply chain.

Eurofoil is expanding its cast-house capacity in Dudelange, Luxembourg, as a first phase of a bigger scheme to increase its continuous casting capabilities considerably. This first phase comprises the mechanical upgrade of one of the casters and a complete overhaul of the water-cooling system for improved heat extraction from all casters.

"This investment will render Eurofoil less dependent on external foilstock suppliers and will allow Eurofoil to be more reactive towards its customers in terms of lead time," commented Willem Loué, the Managing Director of Eurofoil, adding: "This is the most important investment on site in the last 10 years."
