

**Eurofoil specialises in the production of aluminum foil (6-300 $\mu$ ).**

**With its two production sites (France and Luxembourg), Eurofoil offers high-quality foil for a wide range of end products.**

Thanks to the Continuous Casting process, Eurofoil is a completely independent supplier and can offer and maintain short delivery terms.

Eurofoil is a major producer of converter foil used in flexible packaging (food, pharmaceuticals and cosmetics). The company prides itself on its hygiene certification, which complies with international food and pharmaceutical packaging standards.

The container production at Rugles in France also benefits from the above food standards.

Eurofoil also produces foil and strips for industrial applications (insulation, heat exchangers and application in modern HVAC systems (heating, ventilation and air conditioning)).

Eurofoil aluminium fin stock is also used to produce automotive heat exchangers. Eurofoil is ISO / TS 16949 certified for this purpose. This quality management system fulfills all requirements of the automotive industry. We are also members of IMDS (International Material Data System).

**The fully qualified Eurofoil Team will be available on our stand, throughout the Fair, to present the products and supply chain solutions for which we are well-known.**

**Visit us at "Aluminium 2016" Hall 11 Stand I11**
